SUMMARY

Gameplay Engineer with a DigiPen Master's degree specializing in C++ game development and gameplay systems. Well-rounded professional background with 9 years of C# software development experience across games and business software, including 4 years building games using Unity. Known for a collaborative, cross-disciplinary mindset and proven ability to work carefully within large, unfamiliar codebases, solving problems and building systems while considering broader gameplay and performance impacts.

EXPERIENCE

Gameplay Programming Contractor | (NDA) | Washington | May 2025 - February 2026

- Contributed Unity gameplay programming support on a confidential 9-month project under NDA.

VR Gameplay Engineer | Endeavor One | Seattle, WA | June 2022 - February 2025

- Architected five core gameplay systems including player movement, damage flow, data-driven UI, VR interactions, and a unified feedback pipeline.
- Translated cross-disciplinary requirements and design goals into gameplay, movement, and weapon sandbox features.
- Developed gameplay prototypes and pitch concepts, with two selected for investor-facing presentations.
- Worked effectively within mature gameplay codebases by studying existing architecture, adapting to team workflows, and resolving bugs with care.

Senior Software Developer | ERP Edge | Seattle, WA | March 2025 - Present

- Built custom C# and SQL-backed services for live ERP systems, automating business workflows across 20+ client companies.
- Incorporated client requirements to enhance backend services and dashboards used by hundreds of concurrent users without interruption.
- Modernized legacy Epicor ERP systems by replacing client-side embedded code with reliable server-executed functions that use REST-based services.

Software Developer II | ERP Edge | Seattle, WA | May 2017 - June 2022

EDUCATION

Master of Science in Computer Science | DigiPen Institute of Technology | Concentration in Computer Graphics | 2022

Bachelor of Science in Computer Science | Pacific Lutheran University | Minor in Mathematics | 2020

PROJECTS

Unannounced Unity VR Project | Endeavor One

- Built a centralized feedback pipeline used by all disciplines to trigger music, SFX, VFX, haptics, debris spawners, and decals with managed lifecycles.
- Renovated a priority-driven core movement system for agents, allowing movement behaviors to be interchanged and toggled easily.
- Implemented a custom modular damage flow system supporting health, shields, vulnerabilities, and tree-based dynamic hit location logic.
- Developed physics-based weapon sandbox features including swing prediction, hit feedback, weapon feel, and dynamic weapon behaviors.
- Prototyped stealth gameplay mechanics such as stealth obstacles, stealth detection UI, allied AI coordination, and stealth weapons.

Iron Man VR | Endeavor One + Camouflaj | www.meta.com/experiences/5017327094985781/

- Performed memory and performance profiling to identify performance bottlenecks and memory leaks causing frame drops, hitching, and crashes.
 - Adapted quickly to a co-development team's workflows and existing codebase, earning leadership recognition for immediate, impactful contributions.
 - Resolved 50+ critical and progression-blocking bugs across visual scripting and code.
-

SKILLS

Programming Languages: C#, C++, SQL, Lua, Java, HTML, ASP.NET

Tools: Unity, Perforce, Git, Unreal Engine, TeamCity, Visual Studio, Visual Studio Debugger, SQL Server Management Studio

Techniques: Object-Oriented Programming, Event-Driven Architecture, REST APIs, JSON, Database Management, Memory Profiling, Performance Profiling, System Planning, Problem Solving, Requirements Gathering, Cross-Collaboration, Gameplay Programming, Peer Review, Appreciates Feedback, Adaptable
